

Legacy Number Removal

Medicare has indicated that beginning **May 23, 2008**, all legacy numbers must be removed or claims will be rejected. Legacy software users must manually remove all Medicare, PIN and UPIN numbers from the physician master file, and from the sole and/or group screens. Some offices may experience additional problems related to their tax ID after the legacy numbers are removed. If you receive error M379 or M382 on your Medicare Error Summary Report, you will need to contact Medicare to confirm and possibly change the tax ID number that Medicare has linked to your NPI number.
